Experiment -1

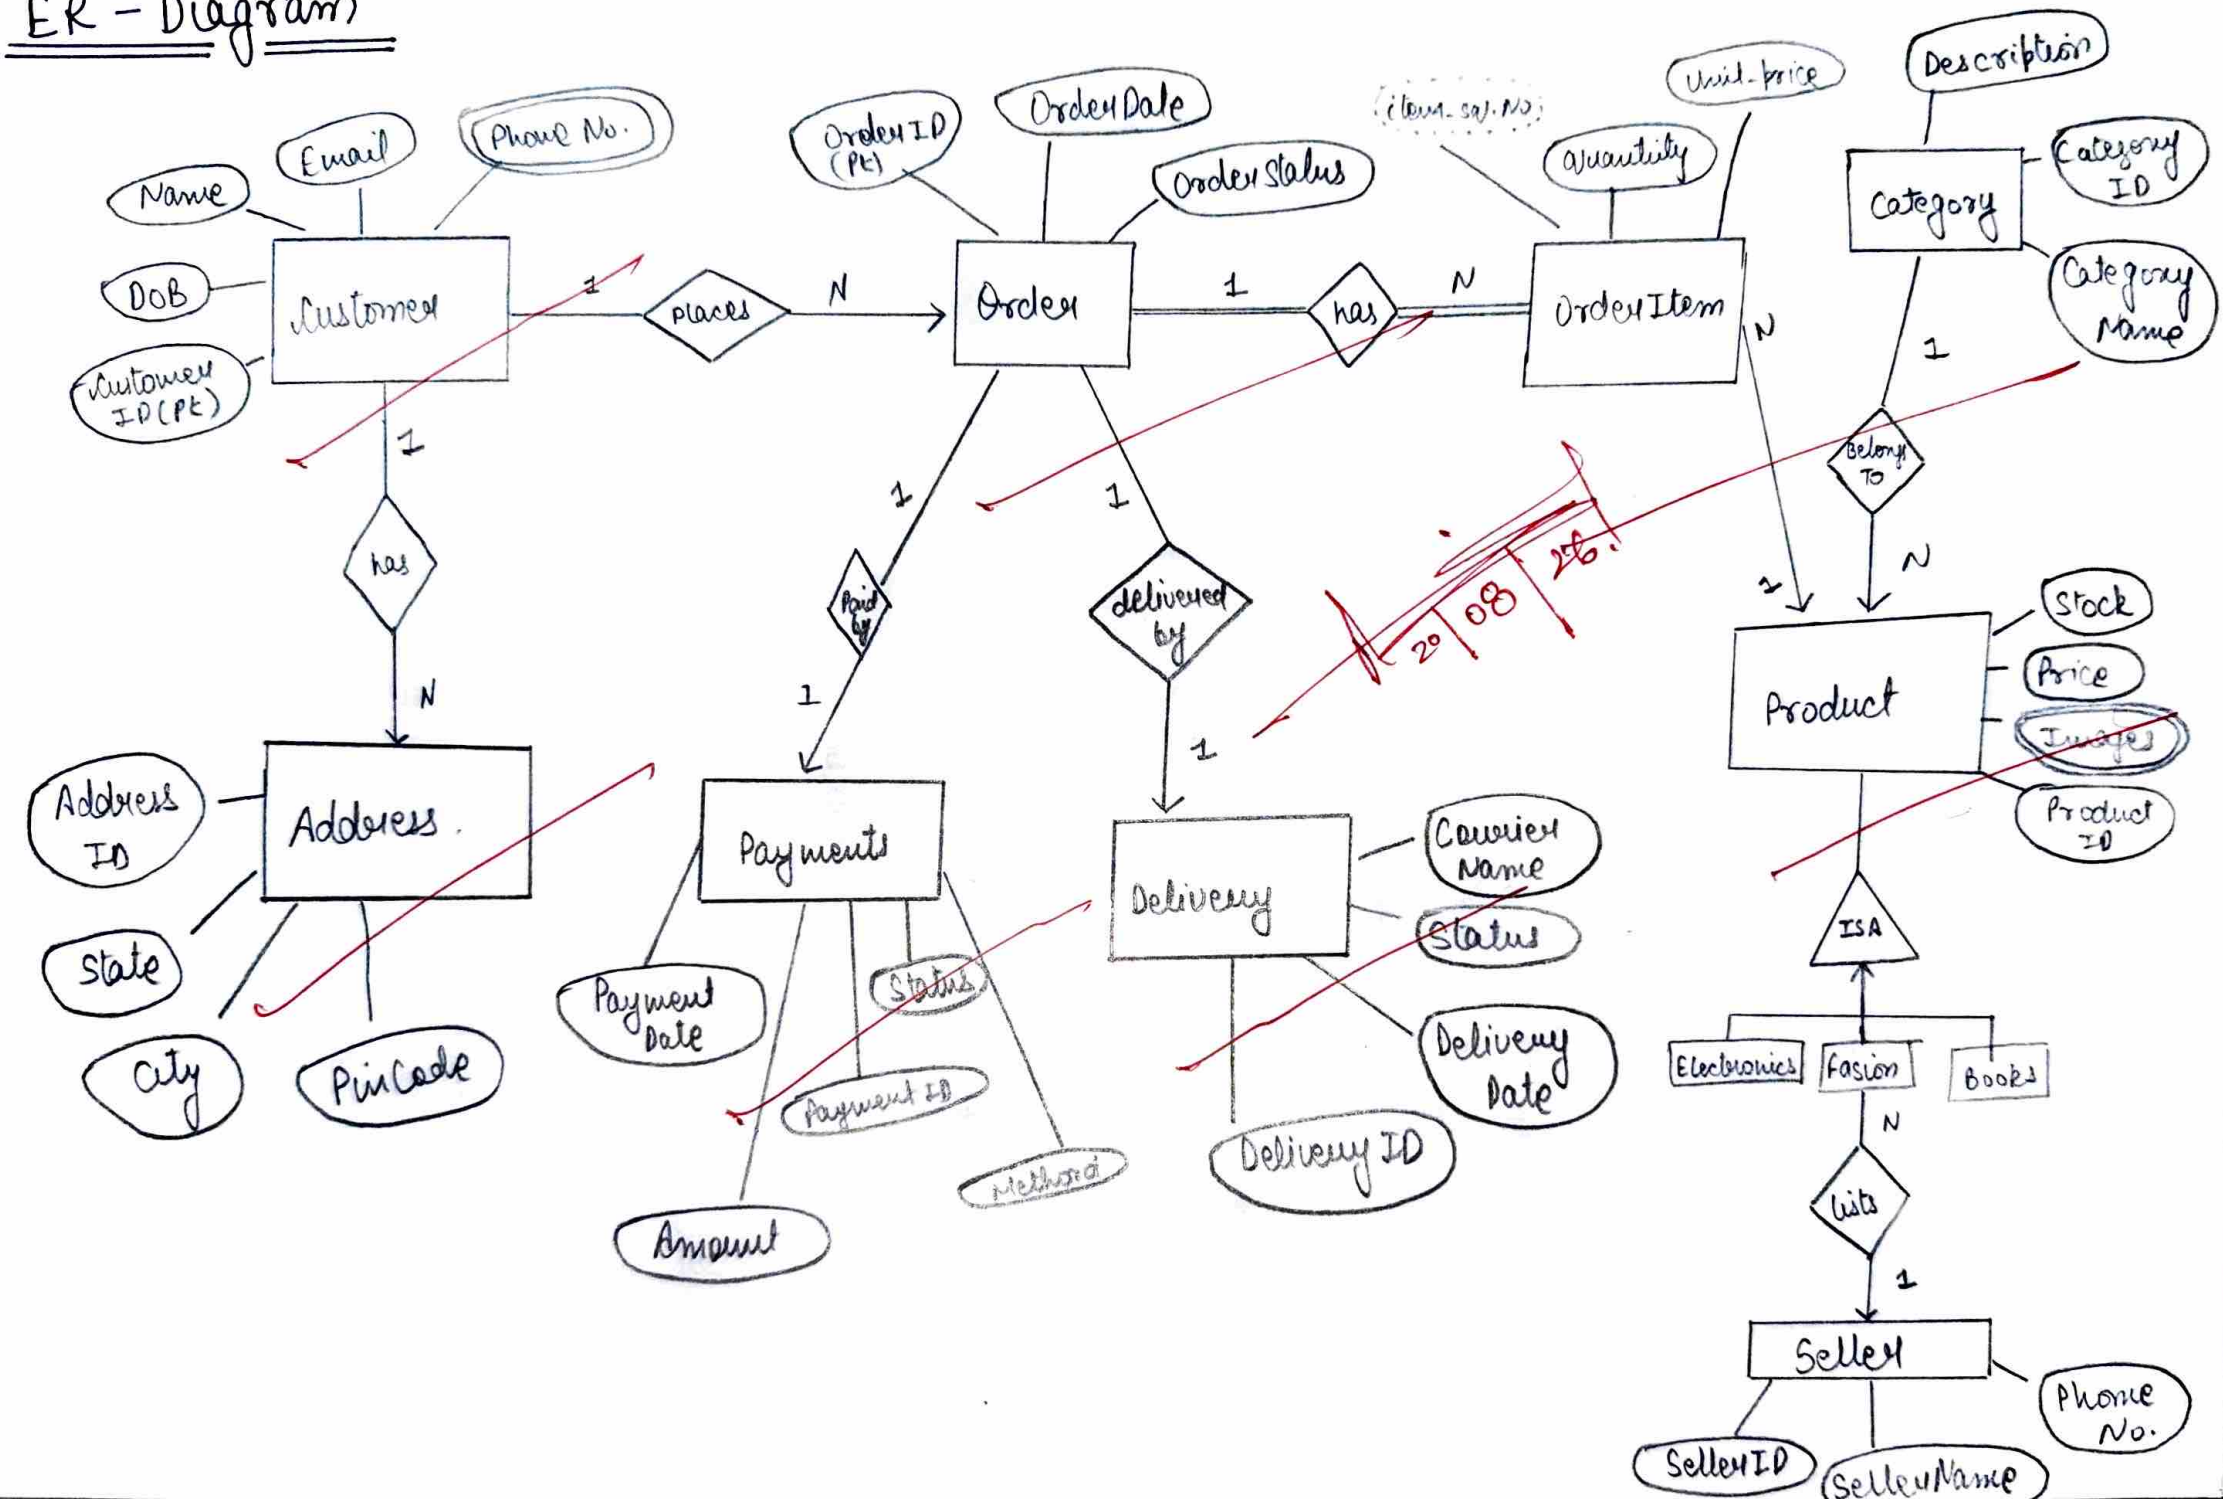

Aim: To design an ER- Diagram for an Indian E-commerce platform containing entities customers, Product, order, order time, seller, category, Payment, Delivery and address.

Theory: An entity relationship (ER) model is a conceptual representation of data used in database design. It provides describes entities, their attributes and relationship among them.

Key Components:

(i) Entity: Real world object represented by [ ].
(ii) Attributes: Property of an entity.
(iii) Primary Key: Uniquely identifies an entity.
(iv) weak entity: Entity which depends on another entity.
(v) Relationship: Association b/w entities.
(vi) Specialization: Dividing entity into subclasses.
